

November 22, 2020

Goals

- Jordan
 - Get the rest of the models implemented
 - Automate update/restart of server
 - Set up sprints (as github milestones) that include all of the stories and subtasks
 - Divide subtasks in each sprint among team mates to form a plan of how we're going to get things done on time
- Jacob
 - Continue working on functions
 - Implement Permission class
 - Start working on sorting functions
- Bernard
 - Keep completing dummy webpages with different features for practice
 - Kept up with the project milestones from this past week
 - Researched key ideas we want to implement for our design
- Robert
 - Have a more productive week than this week from an individual perspective
 - Finish Database Setup
 - Complete at least 2 features
- Abdullah
 - Goals for next week are to continue to collaborate with Bernard on front end issues and my group through meetings and Discord
 - Another goal is to continue resolving Github issues that we assigned ourselves to
 - Another goal is to have successful meetings during class this week and continue to progress

This Week's Progress

- Jordan
 - Set up feature for [user sign up](#)

- Set up feature for [user sign in](#)
- Set up feature for [user privileges](#)
- Set up [BDD test execution](#)
- All back end tasks have an issue to track work needed
- Set up user [registration and login](#)
- Jacob
 - Worked on the milestone
 - Started working on sorting functions
 - Did not start on permission class
- Bernard
 - Start looking for what features we are gonna want to have
 - Keep researching ideas we want to implement for design
 - This week we discussed various aspects of our project during the class meeting.
- Robert
 - Finished .feature file
 - Further completed back work
 - Did not complete features yet, plan to do them in next few days
- Abdullah
 - Added list__notes.feature
 - Worked on assigned issue with Bernard
 - Had successful meetings with my team on both Tuesday and Thursday
 - Worked on milestone deliverable

Next Week's Goals

- Jordan
 - Get an mvp of the project ready to go
 - Complete user registration
 - Update get__notes to accept a user model for filtering
 - Add delete operations for note
 - Add pytest-bdd test definitions for the features we implement
- Jacob
 - Finish sorting functions

- Start working permission class
 - Work on the milestone
- Bernard
 - Goals for next week are to collaborate with Abdullah on finalizing a visual design for our application, as we are the front end guys.
 - Get ahead for whatever is to come
 - Talk and work through the issues that are being assigned
- Robert
 - Complete edit note feature
 - Complete view counter feature
 - Complete delete comment feature
- Abdullah
 - Continue to work hard with my teammates

Meeting Agenda

- How robust should our error handling be for the MVP?
- Will the default unauthorized views provided by flask-login be sufficient?
