Sorting Feature
Milestone #6
Group 14

Backend Description

The feature we implemented is the sorting feature for a list of notes. The feature is
dynamic, meaning it can sort by any attribute in the "Note" table. In addition,
it can reverse the order. However, we are only going to sort by owner, views, rating, and
title.

Frontend Description

On the frontend side, the feature displays a list of notes. The user can click "User,"
"Title," "Rating," and "Views." Clicking one of these buttons will sort by the attribute. If
the user clicks the same attribute again, the list will be sorted in reverse.
